

FOR T REX[®]

THE TOTAL PROTECTION SYSTEM

 **Base**
feel the comfort 

FORTREX IS THE NEW LINE BY BASE PROTECTION WHICH ENSURES AN OVERALL PROTECTION DURING THE MOST DEMANDING APPLICATIONS.

Thanks to a revolutionary technology system and innovative materials, Fortrex provides protection and comfort, flexibility and stability, cushioning and firmness.

FOR THE MOST DEMANDING APPLICATIONS IN THE HARDEST CONDITIONS.

- >> HEAVY INDUSTRY
- >> BUILDING
- >> LARGE CONSTRUCTIONS:
RAILWAYS, BRIDGES, ROADS, ETC.
- >> MINES
- >> FARMING
- >> SYLVICULTURE
- >> OIL&GAS

EXTENDED PROTECTION

LOWER PROTECTION

①

In the rear part of the sole, there is an **ultra-resistant rigid insert** of **W** shape.

Thanks to the shape and to the composite material, the barrier **can divert and warp the nails avoiding perforation**, protecting, therefore, the foot from below and from the side, even from nails with a diameter of 3 mm.

①

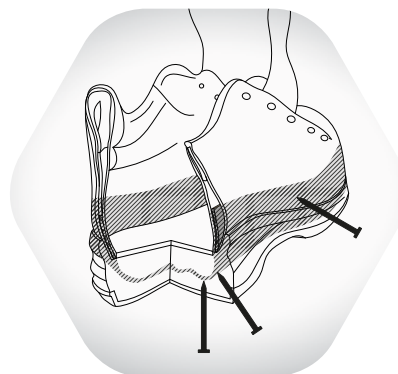

②

In the front part of the sole, the new-generation **flexible ballistic fabric** ensures resistance to perforation, without affecting the movements of the foot.

SIDE PROTECTION

The protection system against the accidental cutting and perforation risks starts from below and extends laterally along the perimeter of the shoe.

UNEQUALLED COMFORT

Excellent fit, breathable materials and insulating technology against hot and cold temperatures.

Fortrex is designed to feel always comfortable, even during the hardest activities and the most difficult weather conditions.

Performance and Comfort: always together.

"V" ZONE

FLEXIBLE AREA TO SUPPORT THE STRETCHINGS.

The ballistic fabric in the front part of the sole provides a high level of elasticity and flexibility, allowing the shoe **to support the movements and the stretching of the foot**, even remaining a barrier against the perforation caused by nails of 3 mm too.

MAXIMUM FLEXIBILITY

***COMFORT &
OVERALL
PROTECTION.
ANYWHERE.***

FOR T REX

ENHANCED STABILITY

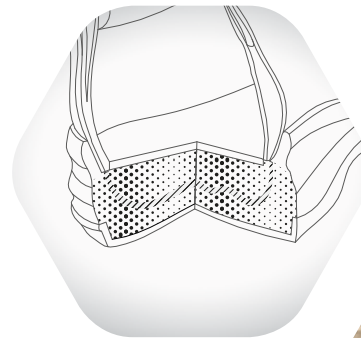

Fortrex is equipped with an ultra-resistant rigid insert in the rear part which provides maximum stability to the rear foot part as well as torsion resistance in the medial area.

The result is an incredible **enveloping sensation in the tarsal area, ensuring the maximum control during each movement.**

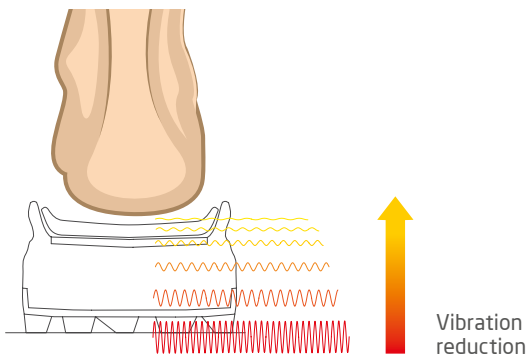

SUPERIOR CUSHIONING

The ultra-resistant rigid shell is inserted between the two soft viscoelastic material layers which ensure an **extra cushioning effect** in order to absorb high-impact energies in the heel and to relieve pressures on the joints.

VIBRATION ABSORPTION

The sole is made of layers of different consistency and thickness in order to soften vibrations, protecting the spinal column and the joints.

FIRMNESS AND DURABILITY

The sole made of polyurethane and rubber ensures the maximum resistance.

The upper is designed in a single piece to avoid lacerations and the integrated toe-cup into the sole protects the toe from abrasion even in the most extreme situations.

Which is the result? Extreme durability and high performance in the most demanding conditions.
